SUMMARY

MarTech Engineer with a background spanning analytics engineering, workflow automation, and full-stack development. Currently working as a solo independent contractor for an outdoor apparel and lifestyle brand, owning a server-side tracking stack end to end — architecture, attribution pipelines, and privacy compliance — after inheriting and substantially rebuilding a broken analytics implementation into a modern, consent-aware, server-routed system. Comfortable moving fluidly between client-side and server-side tag management, cloud data warehousing, and custom automation tooling, with hands-on experience across the Google Analytics and Tag Manager ecosystem, BigQuery-backed reporting pipelines, and AI-assisted development workflows. Background also spans mobile and web development and applied AI tooling, alongside a BCAD in Application Development. Known for taking ambiguous, under-documented systems and turning them into reliable, well-instrumented infrastructure that other teams can depend on.

SKILLS

ANALYTICS & MARTECH

- Google Analytics (GA4)
- Google Tag Manager (client + server-side)
- Google Ads
- BigQuery
- Looker Studio
- Consent Mode V2
- Microsoft Clarity
- Meta Business Suite
- BazaarVoice
- Statistical Data Analysis

AUTOMATION & AI

- n8n
- MCP Server Development
- Claude API
- Claude Code
- AI Fluency Framework & Foundations

DEVELOPMENT

- JavaScript (ES5/ES6+)
- TypeScript
- React.js
- React Native
- Tailwind CSS
- Kotlin
- SQL
- PostgreSQL
- Python
- Full-Stack Development
- Back-End Web Development

INFRASTRUCTURE & TOOLS

- Docker
- Tailscale
- Obsidian
- Microsoft Azure
- Firebase
- Supabase
- GitHub
- Jira (Atlassian)
- Linear
- Notion
- Strapi CMS
- Internal Admin & CMS System Integration

EXPERIENCE

MarTech Engineer — KÜHL Clothing

Independent Contractor · Remote · Dec 2024 – Present

- Own client-side and server-side Google Tag Manager architecture, migrating event tracking from front-end dataLayer triggers to server-routed data client tags
- Design and maintain BigQuery-backed attribution and reporting pipelines feeding Looker Studio dashboards
- Lead Meta Conversions API integration and event-quality remediation, including deduplication and parameter passthrough
- Manage consent architecture and privacy compliance across CCPA and GDPR requirements using OneTrust and Google Consent Mode
- Built a Python-based privacy and consent auditing tool to support ongoing compliance checks across the tracking stack
- Implemented session recording and UX analytics tooling through the tag management layer
- Built internal automation workflows syncing product and content data across the marketing and engineering stack, using Notion as a source of truth
- Audit and maintain tag, trigger, and variable hygiene across a high-volume GTM container, removing dead configuration and reducing page-load overhead
- Serve as the sole point of ownership for the analytics and tracking stack, managing the full lifecycle from requirements through implementation to QA
- Build and maintain custom server-side tagging templates to extend GTM's native capabilities for platform-specific event handling
- Diagnose and resolve data discrepancies between client-side and server-side event counts, ensuring consistency across reporting layers
- Coordinate directly with stakeholders to translate business reporting needs into tracking specifications and dashboard requirements
- Manage version control through GitHub and track engineering work across Linear and Jira
- Use Claude and Claude Code for AI-assisted development, workflow automation, and technical documentation
- Lead recurring server-side GTM architecture audits, identifying and resolving security gaps, data-quality issues, and consent-configuration problems across the container
- Investigate GA4 event-volume anomalies, isolating root causes between consent configuration, tagging errors, and genuine traffic changes
- Clean up legacy and invalid events in Meta Events Manager to improve signal quality for downstream ad platforms
- Build and maintain BigQuery attribution tables supporting cross-channel and cross-session purchase attribution reporting
- Design dataLayer-based tracking for on-site recommendation modules, enabling placement- and utilization-level reporting
- Audit Microsoft Clarity session recording configuration, including custom element labeling and funnel tracking accuracy
- Build and harden n8n workflows for content and product data orchestration, including automated error handling and run-summary reporting
- Partner with stakeholders on multi-step automation projects spanning product data, content workflows, and cross-platform tag governance
- Document tracking architecture and data flow to support long-term maintainability of the analytics infrastructure

PROJECTS

Server-Side Tracking Migration

KÜHL Clothing · GTM (server-side) · Stape · Dec 2024 – Present

Re-architected event collection from front-end dataLayer triggers to a server-routed model, removing analytics' dependency on front-end release cycles and improving data reliability across the tracking layer.

Attribution & Reporting Pipeline

KÜHL Clothing · BigQuery · Looker Studio · Dec 2024 – Present

Designed and built a warehouse-backed attribution pipeline surfacing channel-level performance in Looker Studio, closing gaps left by platform-native reporting.

Conversions API Remediation

KÜHL Clothing · Meta CAPI · Dec 2024 – Present

Audited and rebuilt server-side conversion event delivery to Meta, resolving deduplication and event-match quality issues across the funnel.

Consent & Privacy Compliance Overhaul

KÜHL Clothing · OneTrust · Google Consent Mode · Dec 2024 – Present

Rebuilt consent architecture to meet CCPA and GDPR requirements, including geolocation-based rule logic and consent-state propagation into the tag layer.

Utah Mountain Lion Conservation

Postcard Campaign · Wix Studio · Velo · Geocodio

Legislator lookup and postcard-generation tool for a public advocacy campaign — address-to-district resolution with Geocodio, mobile-optimized embed built with Velo page code.

Emeris

Personal / Academic Project · Kotlin · Firebase · MPAndroidChart · 2023 – 2024

Native Android app with XP tracking, rank progression, and data visualization, developed as a structured project alongside university coursework.

EDUCATION

BCAD — Bachelor of Computer and Information Sciences in Application Development

IIE Varsity College · 2024 – Present

HMAW — Higher Certificate in Mobile App & Web Development

IIE Varsity College · 2023 – 2024

CERTIFICATIONS

AI Fluency: Framework & Foundations

ANTHROPIC

Core framework for working effectively and responsibly with AI systems, covering delegation, description, discernment, and diligence in AI-assisted work.

AI Fluency for Educators

ANTHROPIC

Applies the AI Fluency framework to teaching, covering integration of AI tools into classroom instruction and assessment.

Claude 101

ANTHROPIC

Introduction to using Claude effectively across everyday tasks and workflows.

Claude Code in Action

ANTHROPIC

Applied, hands-on use of Claude Code across real development workflows, including multi-step and agentic tasks.

Claude with Amazon Bedrock

ANTHROPIC

Deploying and integrating Claude models through AWS Bedrock for production applications.

Building with the Claude API

ANTHROPIC

Core patterns for building applications directly on the Claude API, including tool use and structured outputs.

Model Context Protocol: Advanced Topics

ANTHROPIC

Deeper MCP architecture, covering custom server design, authentication, and multi-tool orchestration.

Google Analytics Fundamentals

ANALYTICS MANIA

Core GA4 configuration, event tracking, and reporting fundamentals.

Front End Development – CSS

GREAT LEARNING

Fundamentals of CSS styling and layout for front-end web development.

AI Fluency for Students

ANTHROPIC

Applies the AI Fluency framework to academic contexts, covering responsible use of AI in coursework and research.

AI Fluency: Capabilities & Limitations

ANTHROPIC

Covers how to evaluate what AI systems can and can't reliably do, and how to design around common failure modes.

Claude Code 101

ANTHROPIC

Introduction to Claude Code, Anthropic's agentic command-line tool for software development tasks.

Introduction to Claude Cework

ANTHROPIC

Introduction to Cework, Anthropic's agentic desktop app for delegating multi-step knowledge work.

Claude with Google Cloud's Vertex AI

ANTHROPIC

Deploying and integrating Claude models through Google Cloud's Vertex AI platform.

Introduction to Model Context Protocol

ANTHROPIC

Fundamentals of MCP, the open standard for connecting AI models to external tools, data sources, and systems.

Introduction to Subagents

ANTHROPIC

Designing and orchestrating subagent workflows to decompose complex tasks within Claude-based systems.

Google Tag Manager Fundamentals

ANALYTICS MANIA

Core GTM container structure, including tags, triggers, and variables.
